

VISION OF THE DEPARTMENT

The Department will be an internationally recognized centre for value based learning, research and consultancy in Civil Engineering and will produce competent Civil Engineers having commitment to national development.

MISSION OF THE DEPARTMENT

1. To impart high quality Civil Engineering education through competent faculty, modern labs and facilities.
2. To engage in R & D activities and to provide state-of-the-art consultancy services addressing Civil Engineering challenges of the society.
3. To nurture social purpose in Civil engineers through collaborations.

PROGRAMME EDUCATIONAL OBJECTIVES

Civil Engineering graduates are expected to attain the following program educational objectives (PEOs) 3-5 years after Post-Graduation. Our Postgraduates will be professionals who will be able to

- Deliver competent services in the field of Structural Engg., with a knowledge of the principles of engineering and the theories of science that underlie them;
- Continue their professional development, nurture research attitude, and life-long learning with scientific temperament;
- Exercise leadership quality and professional integrity, with a commitment to the societal needs and sustainable development.

PROGRAMME SPECIFIC OUTCOMES

Graduates of the Programme will have:

1. In-depth knowledge in Structural Engineering to evaluate, analyze and design of structures.
2. Inclination towards research of new methods of design and construction using innovative materials.
3. Professional ethics, integrity, teamwork and leadership qualities.

GRADUATES ATTRIBUTES

1. Scholarship of knowledge

Acquire in depth knowledge of specific discipline or professional area, including wider and global perspective, with an ability to discriminate, evaluate, analyse and synthesize existing and new knowledge and integration of the same for enhancement of knowledge.

2. Critical thinking

Analyze complex engineering problems critically; apply independent judgment for synthesizing information to make intellectual and/or creative advances for conducting research in a wider theoretical, practical and policy context.

3. Problem solving

Think laterally and originally, conceptualize and solve engineering problems, evaluate a wide range of potential solutions for those problems and arrive at feasible, optimal solutions after considering public health and safety, cultural, societal and environmental factors in the core areas of expertise.

4. Research skill

Extract information pertinent to unfamiliar problems through literature survey and experiments, apply appropriate research methodologies, techniques and tools, design, conduct experiments, analyze and interpret data, demonstrate higher order skill and view things in a broader perspective, contribute individually/in group to the development of scientific/technological knowledge in one or more domains of engineering.

5. Usage of modern tools

Create, select, learn and apply appropriate techniques, resources, and modern engineering and IT tools, including prediction and modeling to complex engineering activities with an understanding of the limitations.

6. Collaborative and multidisciplinary work

Possess knowledge and understanding of group dynamic, recognize opportunities and contribute positively to collaborative- multidisciplinary scientific research, demonstrate a capacity a capacity for self-management and teamwork, decision making based on open-mindedness, objectivity and rational analysis in order to achieve common goals and further the learning of themselves as well as others.

7. Project management and finance

Demonstrate knowledge and understanding of engineering and management principles and apply the same to one's own work, as a member and leader in a team, manage projects efficiently in respective disciplines and multidisciplinary environments after consideration of economical; and financial factors.

8. Communication

Communicate with the engineering community, and with society at large, regarding complex engineering activities confidently and effectively such as, being able to comprehend and write effective reports and design documentation by adhering to appropriate standards, make effective presentations, and give and receive clear instructions.

9. Life – long learning

Recognize the need for and have the preparation and ability to engage in life – long learning independently, with a high level of enthusiasm and commitment to improve knowledge and competence continuously.

10. Ethical practices and social responsibility

Acquire professional and intellectual integrity, professional code of conduct, ethics of research and scholarship, consideration of the impact of research outcomes on professional practices and an understanding of responsibility to contribute to the community for sustainable development of society.

11. Independent and reflective learning

Observe and examine critically the outcomes of one's actions and make corrective measures subsequently and learn from mistakes without depending on external feedback.

PROGRAMME OUTCOMES**The M.Tech. Graduates from the Department will:**

PO1: An ability to independently carry out research/ investigation and development work to solve practical problem in the field of Structural Engineering

PO2: An ability to write and present a substantial technical report/document

PO3: Students should be able to demonstrate a degree of mastery in the field of Structural Engineering

PO4: An ability to use the modern tools to model and design Structural Engineering systems.

PO5: Ability to apply the principles of engineering, management and finance to execute/implement/accomplish structural engineering and multidisciplinary projects in the context of rapid technological advances.
